Leica M822

The Ultimate Red Reflex Ophthalmic Surgical Microscope

Leica M822: Legendary Leica, Visionary Technology

The Leica M822 ophthalmic surgical microscope features a dual illumination system with an LED for the main light and halogen for unsurpassed and stable red reflex. This innovative illumination system, combined with world class Leica optics, provides surgeons with unprecedented vision to perform surgery more precisely and efficiently.

› Optics and illumination

Precision Leica optics paired with a dual LED and halogen illumination system for a brilliant, stable red reflex

› Ergonomic design and easy use

Excellent vision, comfortable posture for the surgeon, and intuitive control for efficient workflow and precision microsurgery

› Total image management

High-definition video for display, documentation, and communication of procedures and cases

› Flexibility with long term value

OpenArchitecture™ to best handle a variety of surgical procedures, use of special accessories, and adapt to future needs

Optics and Illumination

Razor-sharp, high-resolution imaging with brilliant, stable red reflex

The unique combination of halogen and LED delivers bright, three-dimensional illumination and excellent red reflex. This innovation, paired with outstanding Leica optics, gives surgeons unprecedented vision to perform both cataract and retinal surgeries.

LEICA OPTICS

Images with natural color, superior depth of field, and high contrast deliver crucial information for successful ophthalmic surgery. The Leica M822 incorporates proven 800-series APO OptiChrome™ optics for high resolution of the smallest details.

LEICA LOW LIGHT CONCEPT

The extraordinary degree of light transmission and the high efficiency of the coaxial OttoFlex™ provide the surgeon with a bright, highly defined image, even at low light levels. The benefits for patient and surgeon are many: a more natural image for greater viewing comfort, reduced corneal glare, and greater efficiency – which can translate into better surgical outcomes.

BRILLIANT, STABLE RED REFLEX

With coaxial OttoFlex™ technology, the Leica M822 provides unsurpassed red reflex. Even the smallest cortical fragments can be clearly seen with minimal light. The large coaxial OttoFlex™ diameter provides stable red reflex throughout all steps of cataract surgery. Even if the eye moves intra-operatively during phaco, it remains in the field of illumination.

The Leica M822 builds on the success of the Leica M800 family and includes a series of refinements and new features to give surgeons even more viewing comfort and flexibility.

Total cost of microscope ownership (general illustration)

- Leica M1022 F20 / F40 / C40 / CT40 with LED and direct halogen
- Other microscopes with halogen only and fiber optic cable
- Other microscopes with xenon and fiber optic cable

Comparison is based on initial purchase price, average consumption of bulbs and periodic fiber optic cable replacement costs.

Start saving from day one with the Leica M1022 F20 / F40.

LED ILLUMINATION – RELIABLE, SAFER, ECO-FRIENDLY, AND ECONOMICAL

THE DEPENDABLE CHOICE

An LED light source in a surgical microscope offers significant advantages over xenon and halogen sources. The nominal service life of an LED is up to 60,000 hours. In comparison, xenon and halogen lamps, but also fiber optic cables, need to be changed frequently. The reduced service requirement means fewer interruptions during surgery, more uptime, and smoother workflow.

CAREFULLY ENGINEERED

Leica Microsystems first introduced LED technology into ophthalmic surgical microscopes in 2008. With continued development and refinements, the Leica M822 microscope features the newest LED technology, which offers halogen-like light for a natural color rendering.

SAFER SURGERY

The Leica M822 microscope combines high transmission optics with a dual illumination system consisting of LED plus halogen. The result: a surgeon is free to adjust the optimum light balance, at the lowest possible light intensity, to achieve the best results in terms of red reflex, contrast, and recognition of important details.

ECO-FRIENDLY TECHNOLOGY

As efficient lighting technology, such as LED, become more of the norm, they are changing the energy paradigm. LED light has a lower energy consumption, longer lifespan, and greater durability and reliability than other sources. These characteristics, combined with Leica's Low Light Concept, result in an environmentally-friendly microscope.

COST EFFECTIVE

LED illumination adds value by reducing operating costs throughout the life of the microscope. But the real savings is this: fewer lamp changes mean fewer disruptions and less downtime, which enhances efficiency.

Ergonomic Design and Easy Use

See better, work better, feel better

Working in comfort allows the surgeon to have full concentration. The Leica M822 is designed to not only give surgeons the best possible view, but also help them to feel better while working, day in and day out. Natural posture and fluid movement can mean less tension, less fatigue, and better work.

THE INTUITIVE MICROSCOPE

The controls, adjustments, and movements of the Leica M822 are highly intuitive, making it comfortable to use. The controls and interfaces are designed for easy **use, logical workflow, and personal preferences**. At the microscope, absorbed in concentration, a surgeon can focus on the patient and surgery, not on the microscope settings.

FOR YOUR EYES ONLY

ErgonOptics™ is Leica's broad range of interchangeable binoculars and lens types to meet the individual vision requirements of each user. No other microscope system offers such a wide range of lenses and binoculars for surgeons and assistants. The unique UltraLow™ III binocular for example moves lower than other binoculars to allow stacking of auxiliary accessories.

VARIETY OF FLOOR STANDS AND CEILING MOUNTS ^[1]

The microscope is very convenient to position and move in the operating room. Leica offers floor stands and two space-saving ceiling mounts for the Leica M822, so the optimal setup can be selected for any OR. Whether on a stand or ceiling mount, the swingarm provides long reach and quickly adjusts into position, locking in for a rock-steady view.

AUTO RESET FOR THE NEXT OPERATION ^[2]

When the surgeon pushes the swingarm up and away from the operating table after each procedure, all microscope functions automatically reset. Now the microscope is ready for the next operation. The staff does not need to reset the system beforehand, which saves time and provides peace of mind for staff and the surgeon.

TEMPORAL APPROACH CATARACT SURGERY ^[3]

The Leica Rotatable Beamsplitter is the world's first two-beam path solution for temporal approach cataract surgery. The easy, side-to-side quick change of the optics for the assistant observer saves time between cases and increases efficiency in the operating room.

Pre- and post-surgery

1

2

SIMPLE AND VERSATILE CONTROL ^[4]

The user-friendly touchscreen control unit offers intuitive control of all microscope functions. Up to 30 surgeons can set their individual preferences, so the microscope is always ready for each surgeon. With the touch of a button, the screen switches between microscope control display and real-time video monitor (two-in-one display).

MULTIFUNCTION CABLED AND WIRELESS FOOT SWITCHES ^[5]

To meet the needs of all users, four models of foot switches are available: cabled or wireless, 12-function or 16-function, which offers four additional freely programmable microscope or accessory functions. The Leica Wireless Footswitch offers maximum mobility for fast, easy adjustments.

PRESETS FOR REPETITIVE PROCEDURES ^[6]

StepCycle™ allows the surgeon to program and switch between predefined settings such as illumination, focus, and zoom for each step of a procedure. He or she can select these presets using the footswitch, which saves time and keeps the hands free for uninterrupted work.

Total Image Management

High definition video for display, documentation, and communication

When the surgeon wants to share still images or videos with OR staff in real time, show a colleague an interesting case, document a procedure for referring physicians, and facilitate consultation with a family – HD and the use of mobile devices are now standard.

STANDARD AND / OR HIGH DEFINITION VIDEOS

The Leica M822 OpenArchitecture™ allows the capture of digital standard videos and still images with a variety of commercially available cameras and recording systems. With the optional Leica HD C100 high definition medical grade camera and the Med X Change video recording and documentation systems, surgical cases can now be recorded in best quality.

DOWNLOAD AND SHARE

The Med X Mobile® application uniquely facilitates wireless transfer of HD videos and still images from the microscope capture system to the Apple® iPhone®, iPod Touch®, or iPad® within seconds. ~~With a USB cable, selected files can also~~ be transferred to most Android™ devices. This allows cases to be transported, viewed, and discussed with colleagues or the patient's family immediately after surgery.

MODERN VIDEO TECHNOLOGY

The Leica M822 offers an ideal package for capturing and exchanging video information:

- › State-of-the-art HD recording system with MPEG4 video compression and picture-in-picture function
- › ~~Leica HD C100 high definition medical~~ grade camera with newest imaging technology
- › Selection of unique Leica video adapters ~~for intra-operative line focus of a video~~ with manual or remote control, and integrated zoom function

› Apple, iPad, iPhone, and iPod Touch are trademarks of Apple Inc., registered in the U.S. and other countries.

› Android is a trademark of Google Inc.

› Med X Mobile and Med X Change are trademarks of Med X Change Inc., registered in the U.S. and other countries.

Flexibility with Long Term Value

Flexibility today and compatibility tomorrow add up to a smart long-term investment

The Leica M822 includes mechanical and electronic interfaces to accept and easily mount a wide range of accessories – now and into the future. These improve workflow, support better surgical outcomes, and allow new surgical techniques to be adopted.

LEICA HUV800 ^[1]

The Leica HUV800 is the solution for panoramic viewing in retinal surgery. The integrated inverter gives the surgeon, assistant, and video camera the same upright view of the retina. The Leica M822 also fully integrates the commonly used wide-angle observation systems or stereo image inverters, such as the OCULUS SDI / BIOM[®] [2].

LEICA DI C800 ^[4]

With the Leica DI C800 head-up display, images from digital sources, providing an XGA signal, can be projected directly into the surgeon's eyepiece. This cockpit-style display can show data precisely where the surgeon needs it.

LEICA SLIT ILLUMINATOR ^[3]

This intra-operative precision surgical slit lamp is ideal for anterior and posterior segment surgery. Using the Leica slit lamp, both of the surgeon's hands are free for the operation, which allows a more fluid procedure.

LEICA TORICEYEPIECE ^[5]

The Leica ToricEyePiece is a cost-effective, easy-to-use, time-saving aid for Toric IOL placement. The rotatable scale is superimposed over the microscope image to help the surgeon find the correct IOL positioning.

LEICA KERATOSCOPE ^[6]

The Leica Keratoscope is an integrated, cost-efficient aid to determine astigmatism in anterior segment surgery.

6

Using one microscope for cataract and vitreoretinal surgery is a very economical approach. It is easy to change the Leica M822 from one setup to the other.

5

Technical Specifications

The Leica M822 F20 / F40 / C40 / CT40 ophthalmic surgical microscopes feature precision Leica optics, a dual LED and halogen illumination system for brilliant red reflex and natural lighting, ergonomic design, intuitive control, total image management, and built-in flexibility to serve multiple uses and adapt to future needs.

ELECTRICAL DATA

Power supply F20 100–240 V, 50/60 Hz, 400 VA

ACCESSORIES

Assistant attachment	Stereo assistant attachment
Beamsplitter	50% / 50%, 70% / 30%, Leica Rotatable Beamsplitter
TV / Photo	Leica HD C100 high definition medical grade camera Leica 2D video systems Leica MDRS4 digital recording system Leica Zoom Video Adapter (VA) f = 35 – 100 mm, Manual VA 55/70 mm, Remote VA 55/70 mm Photo/TV dual attachment: f = 60/85/107 mm for TV, f = 250/350 mm for 35 mm camera Phototube f = 250/350 mm
Wide-angle observation	Leica RUV800 Interface for Oculus SDI / BIOM

Inverters (interface)	AVI, SDI, OIVSL, ROLS
Laser interface	Interface to fit various commercially available lasers, adapters available from laser suppliers
Slit lamp	Motorized travel ±23°, slit width 0.01 – 15 mm, length 3 – 15 mm, rotatable 180°, quick-lamp changer
Keratometry	Leica Keratometer with 50 LEDs
Imaging	Leica D1 C800 high resolution color or digital imaging module for data display, 1024 × 768 pixel resolution
IOL Placement	Leica Toric Eye Piece
Binocular tubes	Variable angle 0° – 180° Variable angle 30° – 150° Variable angle 10° – 50° Ultra Low™ II Variable angle 10° – 50° Variable angle 5° – 25° Inclined angle 45°
Hand / foot switches	wired 16- or 12-function foot switch with controls arranged longitudinally or transversally wireless 16- or 12-function foot switch with controls arranged longitudinally or transversally (optional) 12-function hand switch
Asepsis	Sterilizable protective glass for the objective, sterilizable components for all drive knobs, commercially available drapes
Network (optional)	DICOM compatibility for both videos and still images, archiving to patient records with Leica MDRS4 / Med X Change HDM D®

The fruitful collaboration “with the user, for the user” has always been the foundation of Leica Microsystems’ innovative strength. On this basis, we have developed our five corporate values: Pioneering, High-end Quality, Team Spirit, Dedication to Science, and Continuous Improvement.

MEDICAL DIVISION

What does a surgeon expect from an outstanding surgical microscope? Sharp, clear images, and a modular system aligned with the surgeon and OR staff needs.

Innovations for your practice

From the first surgical microscope with widefield optics in the 1980s to the first microscopes with Horizontal Optics and with LED illumination, Leica Microsystems has been at the forefront of innovation in the development of surgical microscopes.

HD video, fluorescence and retinal viewing systems also demonstrate the continued innovative nature of the Leica team. We strive to provide the surgeon with leading edge technology to enhance performance, surgeon comfort, and patient outcomes.
